

Corporate Profile

SeayCo has been a leader in the development of custom software and controls solutions to the conveyor industry since 1992. SeayCo provides **Smart Solutions for Distribution** through our advanced architecture and our in-house team of experts in the areas of Modular Custom Software, Customized PLC Controls, as well as UL approved Panel Fabrication and Field Wiring. Our team of over 20 software and controls engineers have designed and implemented conveyor controls and software for FKI Logistex, Siemens L&A, HK Systems, and Hytrol. Rockwell Automation recently named SeayCo a “proven, trusted and established” System Integration Partner.

Our team of Software Engineers is able to customize software solutions for virtually any automation requirement and integrate with any host or third party software. Our Controls Engineering team has experience with all major manufacturers’ control platforms. They provide AutoCAD drawings and wiring schematics and PLC programming, installation support and commissioning services. We commission and provide onsite standby support for every system we implement and we provide our source code to the systems users when the project is complete.

SeayCo performs in-house panel fabrication to customer specifications. We routinely design and build control cabinets for projects ranging from push-button control stations to the largest multi-door motor control panels. All SeayCo panels are thoroughly tested prior to leaving our fabrication facility. In addition, SeayCo provides field wiring expertise, from planning electrical systems to implementing wiring for distribution centers and factories.

SeayCo supports our customers 24 hours a day, 7 days a week, 365 days per year, and we also offer premium **immediate access** support packages and **maintenance service** programs.

Our wide range of software solutions includes:

Select-IT ~ a light directed selection system that offers significant improvement over paper picking. Lights and LED displays guide the order picker through the selection process, show the picks with corresponding quantities simultaneously, and then indicate when an order is complete.

Load-IT ~ a wave building software solution which maximizes the efficiency and accuracy of your warehouse picking and shipping processes. With our unique load analyzer and advanced reporting tools, you can fine tune your entire distribution operations.

Count-IT ~ a real-time inventory control system to streamline your order fulfillment. Designed to track your product from receiving to shipping, **Count-IT** automates returns, put-aways and slot replenishment while maintaining slot accuracy with SCC/UPC scanning and slot matching.
