

View-IT Product Sheet

View-IT is SeayCo Integrators Inc. networked based facility monitoring system. A closed circuit camera system, **View-IT** can monitor entire control systems or specific input devices. As with all SeayCo systems, **View-IT** is comprised of functional sub-modules that are compiled together to form a complete system and can be configured as a stand alone system or integrated into an existing conveyor control system. As a stand alone system, **View-IT** is developed as a client /server application set for Microsoft Windows environment.

The **View-IT** client application provides remote monitoring capabilities, video screen popping techniques to alert personnel to an alarm condition, and video caching techniques to allow the user to review 30 seconds of video prior to the alarm. This feature allows the user to replay the events leading up to the alarm condition multiple times to analyze the cause and eventual effect.

Key **View-IT** Benefits:

- Access to unlimited cameras
- Area specific parameter control
- Comprehensive user interface
- Remote user support
- Monitor and alert capabilities
- Configuration help system
- Camera to user security
- User maintenance tools
- Manual video control
- Simultaneous multiple viewers (up to 40)

Video trigger types available:

- sound level
- temperature
- motion detection
- system data error
- system alert signal
- errant product detection
- conveyor condition detection
- operator alert request

SeayCo Integrators Inc. is a systems integration company serving a wide variety of manufacturing and distribution industries. Check out our [website](#) or email info@seayco.net for more information on our wide range of software automation systems.
